PROFESSIONAL SUMMARY

Fullstack engineer with 5+ years of experience, currently Tech Lead at DataCose. I take web products from architecture to production with Vue.js, Nuxt, TypeScript, FastAPI and PostgreSQL, and I also build and run my own products, Clairwire and Forevermore.

PROFESSIONAL EXPERIENCE

FULLSTACK ENGINEER & TECH LEAD

Jun 2024 – Present

DataCose · Remote

- Promoted to Tech Lead of the web development team in 2025. Plan new features as solution architect, break them down into technical tasks and review code.
- Lead development of 10+ client projects, ranging from forms and lead magnets to internal tools and SaaS products.
- Main engineer on Renaissance Club since September 2024, building the member app, staff dashboard and FastAPI backend for a Los Angeles membership club.
- Build responsive frontends with Vue.js, Nuxt, TypeScript, Pinia and Tailwind CSS, and REST APIs with FastAPI, SQLAlchemy and Pydantic on PostgreSQL, tested with Pytest.
- Provision infrastructure with Terraform on Google Cloud (Cloud Run, Cloud SQL, Cloud Tasks) and Firebase for authentication and storage, with Supabase on some projects.
- Author technical documentation, from API specifications and database architecture to 30 Vue.js and Python guides used to onboard colleagues into web development.

FRONTEND DEVELOPER

Sep 2023 – Feb 2025

Styla GmbH · Remote

- Developed new features for the Styla Frontend Editor, a WYSIWYG page editor, and reworked large parts of it using React, TypeScript and the Context API.
- Implemented new features and fixed issues in the Styla Layout Engine.
- Served as feature lead for 10 new clients, taking each from development to deployment and customizing their websites, including sites on Shopware and BigCommerce.
- Contributed to backend development in Node.js and Express, and in Python with Flask and SQLAlchemy for client projects, deployed on AWS with Docker.

SOFTWARE DEVELOPER · CONSULTANT

Nov 2023 – Jun 2024

BilletReduc · Remote

- Worked on the overhaul of BilletReduc's consumer-facing ticketing website, building the frontend with HTML, Sass and jQuery on a .NET stack.
- Helped develop a new admin dashboard for internal operations with Vue.js, Pinia and BootstrapVue.
- Took part in design and demo meetings, contributing to architecture planning and technical decisions.

JAVASCRIPT DEVELOPER

Dec 2022 – Aug 2023

Cryptosphere Systems · Remote

- Developed and maintained two crypto products: RINO, a non-custodial Monero wallet, and Aris, a cryptocurrency transaction platform.
- Built responsive interfaces and reusable components with React, TypeScript, Redux and Tailwind CSS.
- Integrated backend APIs and wrote frontend tests with Jest.

JAVASCRIPT DEVELOPER

Oct 2021 – Dec 2022

Gjirafa Inc · Pristina, Kosovo

- Developed frontend features for Codex, a headless CMS used by magazines in France and the Czech Republic.
- Built responsive, reusable interfaces with Vue.js, Vuex, BootstrapVue, GraphQL and SCSS.
- Collaborated closely with the backend team on API integration, validating endpoints in Swagger.

INDEPENDENT PROJECTS

FOREVERMORE · getforevermore.co

2026 – Present

A platform for personalized animated gift worlds: pick a scene, fill it with photos, a letter and a song, and send it like a message. Designed, built and shipped solo.

- pnpm monorepo of five apps. The customer-facing ones run on Nuxt 4 and Cloudflare Workers, with Supabase for Postgres, auth and storage, and Paddle for payments.
- Scenes are built in Three.js or SVG and GSAP, all reading one shared data contract. Also built Autopilot, a pipeline that plans, writes, renders and checks a week of social posts unattended.

CLAIRWIRE · clairwire.com

2026 – Present

Media monitoring for PR teams: everything said about each client in one feed, and an alert when it matters.

- Collects mentions from news sites, X, Bluesky, YouTube, Reddit and RSS through adapters that all produce one normalized shape, then scores each one for sentiment, source credibility and virality.
- NestJS API and Nuxt 4 dashboard on PostgreSQL and Prisma. Polling, AI analysis, alerts and daily briefs run as BullMQ jobs on Redis, with every AI call behind one swappable provider interface.

OPENWISPER · github.com/Redoni18/openwisper

2026

Open-source, offline-first dictation for macOS: hold a key, talk, and cleaned-up text lands at the cursor.

- Native Swift app (AppKit and SwiftUI) with no third-party packages. whisper.cpp is compiled with Metal, so transcription runs on-device on the GPU.

SKILLS

PROGRAMMING	TypeScript, JavaScript, Python, SQL, Swift
FRONTEND	Vue.js, Nuxt, Nuxt UI, Pinia, React, Next.js, Zustand, Tailwind CSS, Three.js, GSAP
BACKEND	FastAPI, Flask, SQLAlchemy, Pydantic, Node.js (Express, NestJS), Bun (Hono), Prisma, Redis, BullMQ, GraphQL
DATABASES	PostgreSQL, MySQL, MSSQL, MongoDB, Supabase
CLOUD & DEVOPS	Google Cloud (Cloud Run, Cloud SQL, Cloud Tasks), Firebase, Cloudflare, AWS, Docker, Terraform, CI/CD
TOOLS	Stripe, Paddle, Git, Pytest, Jest, Swagger, Claude Code, Cursor, n8n
PRACTICES	Technical leadership, solution architecture, API and database design, code review, technical documentation, mentoring

EDUCATION

BACHELOR'S DEGREE IN COMPUTER SCIENCE AND ENGINEERING

Oct 2020 – Sep 2023

University for Business and Technology · Pristina, Kosovo

LANGUAGES

Albanian (native) · English (fluent)
